

Experienced Traveler

Neonode® zForce touch interaction gives frequent – and not-so-frequent–flyers, total control 24/7

Add versatility and performance to your equipment by including zForce optical sensing to any display or surface—even in the most demanding environments like a portable luggage rack in some of the world’s busiest airports.

Don’t settle for ordinary touch controls or display panels when you can design in a reliable, rugged and economical zForce into your next product today!

Chigoo’s cTrolley is a smart luggage carrier that guides, informs and entertains passengers in their native language as they make their way to their flight. Chigoo chose Neonode’s touch sensor for their demanding 13.3” display touch application in public environments, because image quality, durability and power consumption were key requirements.

cTrolleys are currently used in 10 Chinese airports.

Climate Independent

Outfit your display for bad weather or dirty environments with easily adjustable detection distance.

Gloves On!

Neonode Touch Sensors work with all gloved hands—regardless of glove material or thickness.

Light Resistant

Neonode Technology works in environments with intense or glaring light without any aging effect.

No Electromagnetic Interference (EMI)

Neonode Sensors provide reliable interaction without EMI issues in sensitive environments.

Temperature Robustness

Neonode Touch Sensors add interaction to any surface in hot or cold temperatures without degradation.

Over 60 million consumer products and 3 million cars have used zForce. Contact your regional Neonode Sales Representative to design zForce Optical Sensors into your next application.

zForce Basic Principals, Performance & Technical Specifications

Neonode zForce (Zero-Force) optical reflective platform is based on light reflection technology, integrating optics and electronics in a thin strip along one side of an intended interactive area, creating a 2-dimensional interactive plane.

Neonode optical reflective technology interacts with the position and movement of any reflective object within its range.

It enables reliable touch interaction on any display or surface, with any overlay/protective front cover. Works with any input, including gloves, wet and greasy hands.

Designed for implementation in harsh environments, Neonode rugged solutions enables robust and reliable high speed touch sensing without EMI issues for ruggedized applications at a minimal system cost.

zForce Sensor Touch Interaction

Technical Specifications:

Item	Sensor Variant	Specifications	
Module Size (L x H x W)	0° Type	L x 3.46 x 14.5 mm	(L depending on product variant)
	90° Type	L x 3.46 x 15.45 mm	(L depending on product variant)
Power Consumption I2C Interface Active mode (100 Hz)	72 mm Sensor	57 mW	
	208.8 mm Sensor	80 mW	
	345.6 mm Sensor	104 mW	
Power Consumption I2C Interface Active mode (25 Hz)	72 mm Sensor	44 mW	
	208.8 mm Sensor	45 mW	
	345.6 mm Sensor	47 mW	

Touch Performance Specifications

Item	Specifications
Input methods	Finger, hand or glove
Minimum object size (diameter)	5 mm
Number of touch objects	1,2, or more (depending on application)
Touch accuracy	<5 mm for sensors >180 mm <7.5 mm for sensors <180 mm
Touch Resolution	0.1 mm
Touch activation force	0 N (No activation force required)
Touch active area	Up to 345.6 x 208.5 mm
Response time	16-46 ms (initial touch, at 36 Hz in idle mode) 10 ms (continuous tracking at 100 Hz in active mode)
Scanning frequency	Configurable up to 900 Hz, depending on product variant
